Hx: Adult female reports that product has been routinely used in an enclosed restroom at a school. She occasionally has used this restroom, and when she does it "takes her breath away". She has reportedly had a chronic "cold" for the past 1 month. She has been to a doctor and is currently being treated for cold sx's. She asks if the odors of product have caused her to develop a "cold or bronchitis"?

A:

- Individuals who find an odor strong or unpleasant may develop general symptoms including nausea, headache and respiratory irritation. These symptoms are typically self-limiting and subside with removal of the odor.
- Fragrance or odors do not "cause" bronchitis or colds. Would recommend that you continue to consult your doctor about those health concerns.
- Stay away from the source of odor if it is bothersome to you.
- Ventilate the area by opening doors and windows or consider adding portable fans.
- Given the Hx of chronic "cold", these sx's would not be anticipated and are unlikely to be related to routine product use and brief/minor inhalation exposure.
- Would recommend that you continue to consult a health care professional to rule out other causes.
- Please call back with any additional questions or concerns.
